Art Unit: 1714

1. Rejections under 35 USC 112 are withdrawn.
2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-26 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over EP 0 389 768.
5. The rejection is repeated for reasons set forth in the preceding office action.
6. Applicant's arguments filed 9/26/03 have been fully considered but they are not persuasive.
7. Applicant argues that the patented invention does not use melamine cyanurate as the sole organic flame retardant. The patented invention employs three flame retardant agents, A, B and C. Melamine cyanurate is categorized as a category B flame retardant. Flame retardants of categories A and C are not indicated to be organic. Therefore melamine cyanurate is the sole organic flame retardant set forth in the patented invention.
8. Applicant argues that the patented invention relates to foams that are thermoset rather than thermoplastic polyurethanes. This is incorrect. Patentee indicates that the patented

Art Unit: 1714

invention relates to polyurethanes that may be used as fibers, coatings, elastomers and rigid and flexible foams. See col. 1, lines 1-16.

9. Applicant argues that the patented invention makes no mention of the required molecular weight and tensile strength of the polyurethane employed. Even if the patent is silent as to these requirements it is believed that these requirements are possessed by the polyurethanes that are used in the patented invention. Patentee contemplates the use of a variety of polyurethane products. Polyurethanes having a tensile strength greater than 1500 psi and a weight average MW greater than 70,000 Daltons are considered to be conventional to the ordinary practitioner of this art.

10. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kriellion A. Sanders whose telephone number is 703-308-2435. The examiner can normally be reached on Monday through Thursday 6:30-7:00.
